First Asia-Pacific Summer School on Mathematical Physics

from Classical to Quantum and Complex Systems

Australian National University

26 November - 7 December

The purpose of this Summer School is to bring together honours and postgraduate students from the Asia-Pacific region. Lectures will be given by world-renowned researchers in a variety of modern topics in Mathematical Physics, including Field Theory and String Theory, Statistical Mechanics and Integrable Models, Quantum Entanglement and Symmetries, Mathematical Methods in Physics, Complex Systems, Random Matrices and Stochastic Loewner Evolution. A number of student scholarships will be available.
